Kaladevi Rishidev *Frontend Developer*

kalpanabhandari383@gmail.com 9847714152

Kathmandu, Sitapaila

Summary

Motivated and detail-oriented BSc CSIT graduate with a strong foundation in frontend development using HTML, CSS, JavaScript, React.js, and Tailwind CSS. Completed an internship with hands-on experience in network troubleshooting, Cisco Packet Tracer, IP configuration and technical support. Passionate about building responsive user-friendly web applications and eager to contribute to a dynamic development team while continuously learning new technologies.

Professional Experience

Networking 05/2026 – 07/2026

Nepal Rastra Bank (NRB) Baluwatar

1. Performed IP address troubleshooting to diagnose and resolve network connectivity issues.
2. Configured and troubleshot network printers, including IP address assignment and connectivity problems.
3. Built and simulated LAN/WAN network topologies using Cisco Packet Tracer.
4. Applied networking concepts such as subnetting, routing, switching, and network troubleshooting in practical scenarios.
5. Configured and tested switches, routers, VLANs, and IP addressing in simulated network environments.

Education

Bachelor of science in computer science of information technology(BSC.CSIT) Dhankuta

Shree Triveni higher secondary school

Skills

- HTML
- CSS
- Js
- Reactjs
- Networking

Languages

- English
- Nepali

Projects

Recipe finder

- Architected and developed a responsive, full-stack style recipe search engine and weekly meal planning application using React and React Router, integrating the third-party TheMealDB API to process and display dynamic food data natively.
- Engineered a stateful weekly meal dashboard utilizing conditional mapping to dynamically sort and categorize recipes chronologically by date and target slot (Breakfast, Lunch, Dinner).
- Implemented robust client-side persistence using the browser LocalStorage API, establishing zero-latency data consistency across web reboots for user favorites and complex nested meal planning objects.
- Designed a modular UI infrastructure, including a persistent contextual navigation bar, asynchronous recipe detail rendering views, and an interactive state-driven modal overlay for scheduling meal timelines.

Shopper

- Engineered a responsive e-commerce storefront using React.js, featuring distinct product catalogs tailored for men, women, and kids.
- Developed custom client-side filtering logic in JavaScript to dynamically sort and display products based on user selection without requiring redundant page reloads.
- Integrated backend authentication APIs to manage secure user onboarding, handling user signup, login validation, and protected routing.
- Designed a clean, intuitive layout using semantic HTML and custom CSS, ensuring a fluid user experience across both desktop and mobile viewports.

Portfolio

- Developed a modern and fully responsive personal portfolio website using React.js Vite and Tailwind CSS to showcase technical skills projects and internship experience.
- Built reusable React components and implemented a modular project structure to improve code maintainability, scalability, and reusability.
- Designed a responsive navigation system with smooth scrolling, enabling seamless access to the About, Projects, Experience, and Contact sections across desktop and mobile devices.
- Applied modern UI/UX principles, responsive design techniques, and performance optimization to deliver a clean, user-friendly experience across different screen sizes.

Youtube-clone

- Developed a responsive YouTube Clone using React.js, featuring video playback, video details, and a modern, mobile-friendly user interface.
- Integrated REST APIs to fetch and display dynamic video content, related videos, and channel information using asynchronous data fetching.
- Implemented client-side routing and reusable React components with React Router, improving code organization and user navigation.
